

Girth Calculation

$$2 * \text{Height} + 2 * \text{Width} + \text{Length} = \text{Girth}$$

Example: If the Box is 24" x 18" x 18"

$$\begin{aligned} & [(18+18) + (18+18) + 24] \\ & = \text{Total Girth} = 96 \end{aligned}$$
